

## BUSINESS CONTINUITY

Deployed Resources has extensive experience providing code compliant facilities to satisfy disruptions to ongoing operations. These OSHA compliant facilities support disaster response, temporary functional space during renovations or work continuation services, and turnaround/shutdown support.

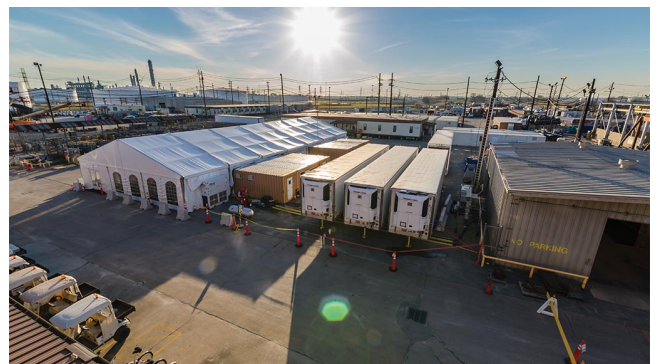

Our solutions are rapidly deployable, nationally based, modular, and scalable so they can fit where needed and support your specific needs. The equipment can support all facets of business including retail, pharmacy, grocery, office, convenience store, staff accommodations, and more.

Business continuity facilities include workspaces, conference rooms, storage areas, temporary power, communications, warehousing, MHE, and turnkey on-site support. Work continuation facilities ensure continuity of operations during labor negotiations, turnarounds/shutdowns, natural disasters, and any other situation that creates a facility disruption. We are prepared to handle lock-in situations with custom meal menus that require minimal resupply without compromising quality.

Typical staff accommodations/work continuation facilities include housing, food service, communications (voice/data), laundry equipment & services, showers, restrooms, and all temporary utilities as required.

Our staff are experienced in working in sensitive areas with heightened safety, security, and confidentiality requirements. All staff members are background checked, drug-free, have undergone OSHA training, and either have or are eligible to obtain a TWIC (Transportation Worker Identification Card).
