

TEMPORARY HOUSING

Temporary housing can be provided either in soft wall (tented) facilities or hard wall (containerized) configurations. Soft wall structures consist of a climate controlled frame tent with raised flooring, lighting, cell phone charging stations, doors, exit signs, and fire extinguishers. Soft wall accommodations can be provided with cots and/or metal-framed beds and mattresses, and linen service. Tents are climate controlled to an ambient temperature of 68-74 degrees Fahrenheit and are sized to provide 50 square feet of space per person.

Hard wall containerized berthing units have separate living facilities for 2-4 persons in secure climate controlled rooms. These units contain sleeping space, storage lockers, and common area for 2 to 4 persons per unit. Each unit is climate controlled to an ambient temperature of 72-80 degrees Fahrenheit and contains work space and cell phone charging areas. All hard wall units are modular and can be extended or reduced based on client requirements.
