

SANITRAX

This modular solution is great for events, humanitarian aid, military deployments, and all other situations where masses of people need temporary facilities. Let SANITRAX help you set the standard! We see a strong and ongoing trend, where the public will not be satisfied with standard plastic toilets or standard gravity toilets. Complete hygienic solutions help to set a positive tone for any event, festival, mission, aid facility, etc. Toilets, urinals, sinks, and showers have to be functional and comfortable, but also look good. SANITRAX has developed a complete experience solution, where toilets are fully integrated. At festivals and events, a clean and luxurious hygienic system will encourage people to spend more money on food and beverages, knowing they will have access to comfortable and clean facilities. At aid stations, bases, or other temporary community installations, SANITRAX will provide comfortable and clean solutions so people can focus on other tasks.

SAFE & EFFICIENT LOGISTICS

With one single transport you can provide 57 toilets,

24 urinals, 16 sinks, and the connecting technical module, keeping your transport costs to a minimum. Offloading and setup is fast and easy regardless of on-site logistics and no special tools are required. The galvanized heavy duty forklift frame and ISO standard corner fittings make the SANITRAX modules very safe and easy to transport and maneuver with a forklift or crane for unloading, placing, leveling, and loading. Because the installation is done by forklift, a minimum of physical labor hours is needed. Three workers can offload a truck and setup 72 toilets in less than three hours. The efficient transport reduces the number of trucks, prevents surface damages, and decreases the number of people on site.

SUSTAINABLE DESIGN

We developed one of the most sustainable mobile hygienic solutions on the market today, equipped with toilets that rely on a proven vacuum flush design powered by Jets™ technology. A technology that saves up to 90% of the water used by conventional gravity flushing toilets (0.25 gallon instead of 2 gallons), while retaining full user comfort. Operators have more freedom to place SANITRAX modules than normal gravity toilets. In fact, the sewage lines and toilet modules can be placed on slightly uneven surfaces. Even with limited freshwater and wastewater facilities available on-site, SANITRAX allows event organizers to provide dependable, high-end, high volume sanitation facilities to their visitors, each and every time.
